

"Excuse me. Do you have that space movie with Vin Diesel in it? "

"What new DVD's do you have?"

"Do you have movies directed by Michael Mann?"

What is Public Terminal?

Public Terminal is a software program that works in conjunction with the Rapid Rental Point-of-Sale System. The Public Terminal Software runs on a Personal Computer which is located on the sales floor. It allows the customer to look up information about Movies, Actors, Directors, New Releases or just search to see if a movie is in or out.

How will Public Terminal Help my Business?

Public Terminal rents more movies because it helps customers remember movies that they might have overlooked on the shelves.

For example, with the actor lookup feature of Public Terminal, a customer could do a lookup in your database of all movies with Tom Hanks, and if the desired title was not available they could be tempted with a different 'Tom Hanks' movie because the program will list all your titles that feature him as an actor.

Also, when an actor suddenly becomes popular or when a Director wins an Academy Award, all their old titles (likely now catalog stock) can be searched in Public Terminal. This will drive highly profitable inventory in the hands of your customers.

Clients who use the Public Terminal claim it's a saving grace on weekends and holidays. The terminal will answer the same redundant questions; such as, "is this in", "do you have this movie", or "what new movies do you have?" just to name a few.
